

Advanced Business Manager

Advanced Business Manager (ABM) has been designed and developed by accountants to create the next generation of accounting software for progressive businesses. ABM is more than just an accounting package, it is a complete business solution available in two editions – Small Business Edition and Enterprise Edition.

ABM is a flexible, feature-rich, robust and expandable solution suited to most industries and business types ranging from construction, professional services through to wholesale & distribution.

Advanced Business Manager (ABM)

The Core System

- > Cashbook

- > Scheduler
- > Business Bulletins
- > Assets Register
- > Document Scanning
- > Integration with Maximizer CRM

Advanced Functions

- > Project Invoicing
- > Snapshot Report Writer
- > Subcontractor Claims
- > Warehousing
- > Advanced Document Handling

Case Study: HSE Primary Care Reimbursement Service
(formerly the General Medical Payments Board)

Industry: Customer Service

Product: Advanced Business Manager

"ABM has reduced our workload."
Les Hickey, HSE Primary Care Reimbursement Service.

The Primary Care Re-imbursement Service administers payments to doctors, pharmacists and dentists who provide services under the Primary Care

Re-imbursement Scheme (PCRS).

The PCRS scheme includes medical card services provided by doctors and pharmacists, prescribed drugs and medicines services provided by community pharmacists and dental services provided to medical card holders. The level of payments and other conditions of service are negotiated by the Department of Health and Children and the relevant professional bodies.

Advanced Business Manager (ABM) was selected to facilitate these re-imbursements. The system had to be flexible, robust, handle large volumes of transactions and offer traceability in case of query. We also required a system that would work seamlessly with Microsoft Excel and Word. We can post all our supplier invoices to our log file and once they are passed for payment they are entered into the system for payment. By using the scanning module, we can attach any relevant documentation like delivery dockets to each transaction.

This simple but clever use of ABM and its modules has reduced our workload enormously. We are now looking at our other processes to see where we can develop ABM to further streamline our operations.

Les Hickey, HSE Primary Care Reimbursement Service.

Features and Benefits

Easy to use

Everything follows logically – quotations, orders, deliveries, invoices – and can be picked up quickly by operators without sacrificing productivity. Strong integration with Microsoft Office features such as instant emailing through Outlook, import/export facilities to Excel and Word, and reporting options using Excel.

ABM grows with your business

ABM can scale from a single user application to support up to 100+ workstations.

Customisable In-depth Security

Your staff can be divided into user groups (min. 1 person), and each can be allocated access rights to specific ledgers, tasks and operations. Every user gets a unique log-on to the system.

Fast, fluent use

Automations reduces user time expenditure and human error.

Flexible and powerful reporting

Over 160 standard management and accounting reports are included in the standard ABM system.

Integrated industry solutions

With seamless integration with a wide range of business solutions, ABM provides specialist functionality in payroll, ecommerce, job & time sheeting, budgets, CRM and much more.

Productivity gains

ABM offers a number of powerful features to improve staff productivity such as using barcode scanners to process stocktakes, automatic purchase ordering as a result of sales orders, displaying key data with warning and status flags for easy identification and much more.

Obsolescence proof
